

Small Batch Dyeing Automation: DOS & DYE® for Just-in-Time Deliveries

At ITMA ASIA 2024, TECNORAMA will showcase its renowned automatic DOS&DYE® system, specifically designed for small-scale production dyeing. This innovative solution significantly reduces production costs for small batches while accelerating yarn delivery times to meet the ever-growing demands of customers.

The system comprises the DOSORAMA WSL dispensing machine and DYRAMA dyeing modules for yarn bobbins of various sizes. The DOS&DYE® 6000 is capable of continuous operation, 24/7, even in the absence of dedicated personnel, working efficiently until the material to be dyed is completely processed. It enables seamless, uninterrupted dyeing cycles, finishing the dyeing schedules and advancing to FINAL quality control.

Thanks to its exceptional "Right First Time" accuracy of 96%–98%, the DOS&DYE® 6000 eliminates the need for sampling or shade verification.

This feature allows for rapid production with just-in-time deliveries while maintaining outstanding technical quality. **Discover the DOS&DYE® system at the ACIMIT booth – Hall 6, Stand C50 during ITMA ASIA in Shanghai from 14 to 18 October 2024.**
