

Tecnorama shows two dyeing related technologies at ITMA

December 11, 2015 (Italy)

Tecnorama at ITMA

Italian **textile** machinery manufacturer Tecnorama presented two machines; Shakerama and Ecodyerama at the recently concluded ITMA 2015.

Shakerama is a new system for dyeing laboratory samples, designed and produced by Tecnorama to complete its range of automatic dyeing machines forming part of the Dos&Dye Compact system.

"This machine is particularly suitable for dyeing knitwear and fabric made of all type fibres, whether natural, artificial or synthetic," the company informed in a press release.

According to Tecnorama, Shakerama is designed to work with groups of more autoclaves carrying out simultaneously dyeing cycles with different recipes but using the same dyeing program.

"The cooling system guarantees perfect temperature uniformity and regularity for all dyeing units avoiding dyeing reproducibility problems," it said.

The Ecodyerama on the other hand, automatically analyses the quality of wastewater during the dyeing process and can also monitor any type of dyeing technique, whether reactive, direct, acid-based, etc.

The water quality is analysed by means of a special optical instrument capable of checking the presence of minimum quantities of dyestuff remaining in the washing water using RGB technology.

Easy to use, it can be applied on all existing dyeing machines and is suitable for any type of fibre and or any form of textile material like flock, yarn, reels and skeins, fabrics, mesh, etc.

Tecnorama also added that many sales contracts were also signed during the fair, as a further sign of the leadership that Tecnorama has gained in the market. (AR)
