

DOS&DYE®

enhances dyehouse productivity

DOS & DYE SYSTEM

TECNORAMA

SUPPLIER OF SUSTAINABLE TECHNOLOGIES

DOS&DYE® System goes green!

LABORATORY

BULK

Dos&Dye® system reduces the number of dyeing trials to obtain the EXACT recipe thanks to the COMPLETE reproduction of dyeing cycle EXACTLY AS in the bulk machines (preparing, dyeing, soaping, washing).
Dos&Dye® is a fully automatic system for laboratory management working 24 hours a day, 7 days a week.

RIGHT FIRST TIME:
exact recipe coming from the laboratory

- LESS WATER CONSUMPTION
- LESS ENERGY CONSUMPTION
- NO CORRECTIONS AFTER DYEING FOR RE-DYEING
- TIME SAVING
- MONEY SAVING
- INCREASE OF BULK PRODUCTIVITY

www.tecnorama.it

order to strictly make the necessary corrections after dyeing and redyeing into bulk machines, with a huge saving of the time dedicated to a production batch and the increase in the productivity of the dye house.

Thanks to the optimization of the production process and to the overcoming of those limits inherent in the management of the laboratory, the system allows reduction in water and energy consumption for an environment-friendly approach and for a considerable saving of time and money.

Dos&Dye® is a completely automatic system composed of a Dosorama dispensing machine and a Dyrama robotized dyeing machine. Capable of working autonomously 24 hours a day, seven days a week, the system, designed and manufactured by Tecnorama, can manage and perform all laboratory dyeing cycles, increasing in the process productivity both of laboratory and bulk machines.

In the laboratory, it reduces the dyeing trials to obtain the exact recipe, thanks to the complete reproduction of dyeing cycle exactly as in the bulk machines in preparing, dyeing, soaping and washing. The right first time result grants the exact recipe coming from the laboratory in
