TECNORAMA's right-first-time solutions for dye-house automation

Mr. Lorenzo Marsiglio, Sales Director, Tecnorama

Tecnorama took another major step into the future at ITMA in Barcelona by honouring the expectations for the 35 years anniversary of the company. Its stand, conceived to welcome customers and dyeing specialists in a relaxing space, hosted many people looking for the last innovations on full-automatic philosophy for laboratory automation.

Not only the worldwide known Dos&Dye system but also the new Dosorama Smart, a laboratory dispensing machine for solutions of dyestuffs and chemicals with original "mono-plunger" volumetric system, designed and built to maintain the multi-pipette concept patented by Tecnorama.

The innovative system "MONO-PLUNGER" maintains all the features of Dosorama dispensing machines, such as speed of execution, dispensing accuracy and elimination of contamination typical of the obsolete mono-pipette systems.

Furthermore, the new axis system has been made according to the most modern and sophisticated technical solutions. Dosorama Smart is a high performing machine at moderate price, designed to considerably reduce the need for technical intervention and to guarantee an easy maintenance.

Tecnorama aims at not only automation for laboratory, its experience and know-how is also for bulk system. A corresponding 3D printed layout attracted many people inside the stand. With its working lights, the scale model gave a detailed idea of how dispensing works in Tecnorama automation system for small production.

ITMA was also the occasion to launch the new advertising campaign: Tecnorama colors the world! ♦
